

Super Gazebo Instructions

1. Remove the Gazebo from the bag. If on soft ground, peg one side and pull from the opposite corner. Ensure the Gazebo is fully extended as this will help you with the next step.

2. Ensure the ring pull is vertical and aligned with the slots on the black ring pull holder, this will enable the frame to click into the correct position when it is in line.

3. Lift the canvas up on each corner to reveal the frame. Hold the supporting leg and lift the roof of the gazebo up until the ring pull clicks in to the hole. Do this on all corners of the Gazebo.

4. If the gazebo isn't clicking into place ensure that you have stretched the gazebo out to its full extent. Now pull the canvas cover back down over the frame

5. Once each side is clicked in position go underneath the gazebo and check the 4 supporting bars that join in the centre of the roof of the gazebo are straight. Push them up if they are not already in line.

6. Now you can raise the legs to get the required height. Start with one corner at a time. Place your foot on the base plate of the corner leg. Ensure the ring pull is vertical and aligned with the slots on the black ring pull holder. Lift the leg until it clicks into place. There are 3 adjustable height settings on each leg. Repeat this with each corner.
